

North Terrace

The Adelaide City Council-funded North Terrace Redevelopment encompasses the recently completed University of Adelaide. This is a significant upgrade to the celebrated North Terrace frontage.

The design showcases the forecourts but is sensitive to the value and character of the heritage buildings. The paving materials and the various forms of street furniture compliment the neutral colours and textures of the buildings whilst enhancing their ceremonial character.

The landscape architects selected ACO's discreet Pavermate™ access covers to provide accessibility to these pits for maintenance whilst preserving the visual continuity of the pavers along the highly visible walkways
