

PORTFOLIO

ACO Cablemate®

Royal Adelaide Showground – SA

The Royal Adelaide Showground recently underwent a \$42 million redevelopment which incorporated 16,000sqm of landscaped pavement.

The paving areas needed to withstand heavy traffic wheel loads from large mining and construction equipment displayed during exhibitions and transportable show rides for the Royal Adelaide Show.

ACO's heavy duty Polycrete® Ducting system was chosen as it meets

Load Class G (AS 3996 – Access Covers and Grates) and offers run layout flexibility.

The solid covers with removable bolts also ensures security and easy access to the cable network.

Manufactured from lightweight, strong and durable polymer concrete, Polycrete® Ducting consists of one metre modular channels that can be assembled to produce continuous runs to suit the cable route.

Product Featured:
CS100 Polycrete® Ducting

Other ACO Products Used:
Trench drains & access covers
