Royal Children's Busway Station

The Inner Northern City Busway links Queen Street Station to Royal Brisbane Hospital. A 4.7km dedicated roadway corridor for buses. The busway contains a number of stations at key locations along its route.

Designers selected ACO's Urbanfil stainless access covers for the Royal Children's Busway station to protect the station's electrical communications and CCTV cables.

At the bus stop, specialty multipart cover systems with portholes were installed allowing commuters to view a touch activated map, illuminated to display information on the busway route.

The covers are recessed to accommodate the footpath's polished concrete topping allowing them to visually blend into the pavement.
